

Access Control for the University of New Orleans

LinkPower™ LPS1000

Since 1980, H&R Operator Services, Inc. has been providing their customers in the access control industry with unmatched service, and peerless knowledge and experience in perimeter access control, including gate operators, electronic locks, IP cameras, RFID, and asset tracking. With over 10,000 gate operators installed throughout the southeastern United States, their hard-earned reputation has been garnered through the quality of their work, as well as word-of-mouth from countless satisfied customers.

One of the University of New Orleans' goals is to provide resident students with the highest quality of living and learning environment at a reasonable cost. The housing areas boast state-of-the-art residence facilities, as well as video surveillance and secure card access to ensure safety. H&R Operators used Inscap Data's wireless bridges and Outdoor PoE Switches to replace and upgrade aging access control equipment at the edges of the housing facilities. Each of these locations had no network infrastructure, and the only power available was at each of the doors or gates.

The flexibility of Inscap Data's LinkPower™ LPS1000 Outdoor PoE Switch allowed H&R Operators to conform to the unique challenges provided by each job site. The rugged IP68 weather-proofing LPS1000 allowed these units to be used in a gulf coast environment full of humidity, corrosion, extreme heat, lightning, and vandalism- normally very challenging elements for outdoor electronic equipment. Using the existing wired infrastructure network was impossible without a large capital outlay for AC power outlets and conduit runs, but Inscap Data's Outdoor PoE Switch products allowed connectivity to be had at a price that enabled the upgrade of a greater number of access control systems at one time.
